BRIDGE Product Catalog
Rehabilitation Resources for Parents, Recipients and Professionals
BRIDGE is a program developed by MED-EL Corporation especially designed for education and rehabilitation professionals, implant users, and parents to help BRIDGE the gap between implantation and the rapid development of improved listening skills and spoken communication. This process begins with identifying the implant user's current skills, setting realistic expectations and goals, developing listening skills each day, and ensuring the best possible device function. The BRIDGE program consists of a wide variety of products, resources and materials for adult and pediatric habilitation, assessment, and device management. A variety of habilitation materials can help guide and motivate both the user and the professional toward achieving the best possible communicative competence. For more information about BRIDGE products, please visit www.medel.com.

MED-EL is committed to supporting cochlear implant users, parents, and the professionals who provide services to people using MED-EL cochlear implant systems.

To be added to MED-EL's educator's list for updates on materials, workshops, and more, please email educators.us@medel.com and put “subscribe” in the subject line.

An order form is available as a download at www.medel.com or by contacting the MED-EL office at 888-633-3524. The order form provides all the information needed to place an order for materials.

Any item with this green triangle can also be found on the Educational Resources CD in the Educator Packet.

MED-EL is able to provide many products in a variety of languages, this includes Spanish (US) and Spanish. Please note, Spanish (US) refers to Latin American Spanish.
Pediatric Habilitation

LET’S GET STARTED
Listening Games for You and Your Baby

This material designed for beginning listeners provides listening activities for families and caregivers with babies and toddlers who have hearing loss and/or cochlear implants. The activities discussed and demonstrated in Let’s Get Started help develop the child’s listening and language acquisition in a very simple and natural way in everyday situations. Developed by the Yorkshire Cochlear Implant Service in collaboration with MED-EL.

Contents:
• Booklet
• DVD
Recommended Ages:
Infants and toddlers
Recommended For:
Parents, professionals
Cost: $40.00
Available Languages:
English, Finnish, French, German, Spanish

MY LITTLEARS® DIARY

My LITTLEARS Diary gathers information about early auditory, speech and language development. It is both a record book and an assessment tool for documenting early development of children with hearing loss using hearing aids and/or cochlear implants. My LITTLEARS Diary includes several different resources to guide and support parents during the early developmental stage. It includes a Parent’s Book of information and how to use the material, a Diary to record parent’s observations, a Therapist Book that includes a comprehensive overview of developmental milestones during the first two years of life, a First Words List to document the child’s first words and an Attachment to the Therapist Book for professionals to use with families. Authors: Kim Veekmans, Heike Kühn-Inacher, Susanne Almadin, Patrick D’Haese.

Contents:
• Diary*
• Therapist Book
• Parent’s Book
• Attachment to the Therapist Book
• First Words List
Recommended Ages:
Birth to 2 years
Recommended For:
Parents, professionals
Cost: $45.00
Additional Diaries free download from www.medel.com (download does not include Therapist Book, Parent’s Book, Attachment or First Words List)
Available Languages:
English, French, German, Russian, Turkish

*The Diary is the only item on the Educational Resources CD.
LITTLEARS® DIARY ACTIVITIES

The LittleARS Diary Activities include 28 activities designed to supplement the My LittleARS Diary. These activities are for parents and young children to share while being guided by a therapist. When used with the My LittleARS Diary the activities correspond to the weekly diary entries. This resource can also be a stand-alone material. A wonderful resource for newly implanted children, their parents and early interventionists. Developed by Julie Kosanar.

MUSICAL EARS®

This is a musical therapy/training program for young children with hearing loss who use hearing aids and/or cochlear implants. It is designed for professionals working with young children and includes an evaluation form for 24 music listening behaviors that can be used both pre- and post-musical training. The DVD provides guidelines for implementing the music training program and demonstration of musical activities with embedded videos. Developed by Julie Kosaner.

DUAL-LANGUAGE LEARNING FOR CHILDREN WITH HEARING LOSS

Assessment, Intervention and Program Development

Michael Douglas developed the Dual-Language Learning for Children with Hearing Loss for professionals working with children who have cochlear implants and come from families that do not speak the majority language or speak more than one language with a range of proficiency in the languages. This booklet covers issues of assessment including determining language of assessment, administering and interpreting assessment, and sharing results with the family. It discusses intervention including models of intervention and implementation strategies. The booklet provides a guideline for administrators for developing a successful bilingual language program. Case studies are provided to assist professionals in analyzing data and making recommendations. Additionally, an appendix of reproducible sheets of specific resources is included.

PICTURE PERFECT PRESCHOOL

Alisa Beard and Patricia Parekh developed the Picture Perfect Preschool especially for parents of preschool-aged children. The Picture Perfect Preschool (PPP) package was designed to assist families who are just beginning the search for a preschool setting for their young child with hearing loss. It also includes a helpful tool for evaluating a child’s current preschool placement to determine if the use of audition, speech, language and academic skills are being maximized.

Product includes: 20 Questions, a guideline for parents to use when evaluating a potential preschool; the Parent Observation Checklist which assists parents in focusing on and documenting observations about important listening and language targets that can occur throughout the various units of a typical preschool day (circle time, snack time, etc.); and Teaching Tips, a simple guide parents can provide to the classroom teacher with suggestions to better serve the child with hearing loss in the classroom.
**Pediatric Assessment**

**EARS**: EVALUATING AUDITORY RESPONSES TO SPEECH

EARS was developed to follow the emerging auditory skills following cochlear implantation. The EARS battery includes tests of different linguistic levels suitable for children of different ages. The test has a number of closed and open set speech perception tests, as well as questionnaires that can be completed by the child's parents and teachers. It includes normative data collected from over 700 children using CIs for each test. Developed by Diane Allum-Mecklenburg.

**COMMON OBJECTS TOKEN (COT) TEST**

The COT Test is a sentence level test for children with a hearing loss that measures auditory speech perception skills. The test is a closed set task, but of higher complexity than most closed set tasks. It aims to assess a child at a transition level between basic closed set tasks and open set tasks. The test is suitable for children with cochlear implants from as young as three years of age. The measure has two different levels, a "quick-test" with three subtests and a "full-length" version with six subtests. This measure is also included in the EARS battery. Authors: Ilona Anderson, Jane Martin, Anne Costa, Lyn Jamieson, Geoff Plant, Markus Pitterl.

**KIDTRAX**

KidTrax is a set of materials based on de Filippo and Scott’s (1978) speech tracking approach. It is designed for use with children with hearing loss. The materials can be used with children with varying skills and abilities. The story books and texts included supply teachers and therapists with five options at each of the three different levels: ten bright, attractive picture books of Levels 1 and 2 for younger children and five texts of Level 3 adventure stories for older children. This is an outstanding resource to support teachers and therapists working to increase children's auditory memory through speech or discourse tracking. Developed by Geoff Plant and Sue Archbold.

The Mainstream Assessment of Readiness for Children Over Five (MARCOF) was developed by Cynthia S. Robinson. This tool is designed for educators and parents of children with hearing loss to use together for analysis of a child's readiness to enter mainstream education with hearing peers. Consideration is given to a variety of areas including standardized testing, listening behaviors, speech and language skills, auditory perception, academic skills, social/emotional development, and receiving school and family concerns. The importance of each area for evaluation is explained in a short summary. A numerical scoring sheet targets a child's strengths and challenges and provides information on overall readiness, as well as highlighting areas needing further intervention or support services. The kit includes a manual explaining skills that are considered important along with recommendations for assessments that will help gather the data needed to assist in decision-making for successful mainstreaming.

**Identifying Early Phonological Needs in Children with Hearing Loss**

Developed by Carolyn Brown and Elaine Paden this well-known clinical tool is designed to assess spontaneous use of first level phonological patterns in children with hearing loss. A list of 25 words (picture cards included) that are typically within the speaking vocabulary of young children with hearing loss is utilized in this test. The word list provides at least five opportunities for the child to demonstrate how well he/she spontaneously targets each basic consonant feature, such as manner, place, and voicing, as well as each of the primary vowel areas, diphthongs, and basic word patterns. Numerical scoring of the tests reveals whether the child's patterns are missing, emerging or mastered. It is suitable for children with low-level verbal competency and is age independent.

**Auditory Skills Checklist**

The Auditory Skills Checklist is a measure that assists teachers, therapists, audiologists and parents in tracking the progress of a child's auditory development and setting logical goals. It is designed for use with children of any age and skill level. This checklist is quick and easy to use and now includes numeric scoring to monitor a child's progress on a variety of developing skills over time. Developed by Nancy Galeffe-Schenck.

**LittlEARS Auditory Questionnaire**

The LittlEARS Auditory Questionnaire is a parent questionnaire that evaluates auditory behaviors that are observable as a reaction to acoustic stimuli. This questionnaire is intended to follow the auditory development of children after newborn hearing screening from birth to 24 months of age; or children with cochlear implants and/or hearing aids with a hearing age (time after first fitting) of 0-24 months. It is based on normative data from children with normal hearing birth to 24 months of age. Expected values and minimal values are given for individual comparison. The questionnaire consists of 35 questions, which can be completed by the parents with their service provider. Completion instructions are provided on the questionnaire.

Teen Rehabilitation & Assessment
Teen Rehabilitation & Assessment

TOOLS FOR TEENS

Tools For Teens is a training program that provides teachers and therapists with speech communication training materials for use with cochlear implant users. It includes activities designed to improve a student’s listening skills and to foster an interest in the intricacies of spoken language and word formation. The training program is divided into consonant and vowel discrimination exercises, picture matrices, common sentences, thematic sentences, folk songs, questions and answers and looking at lists. Crosswords, word search exercises, playing with words and TeenTrax (a speech tracking tool) are also included. Developed by Geoff Plant.

TEENEARS®

TeenEARS is a test battery specifically developed for teenagers with cochlear implants. It is comprised of seven tests and one questionnaire. These tests cover differing levels of language competence, as well as auditory skills and psychosocial issues. The listening skills range from basic (environmental sounds) to more complex (speech tracking) and include open and closed set assessments. TeenEARS can either be used as an extension of the EARS test battery, or as a stand-alone assessment battery for newly implanted teens. This test battery was developed in conjunction with a number of centers in the United Kingdom currently working with teenagers. TesTrax is included in this battery.

**AUDITRAIN**

Auditrain is a training program designed to help cochlear implant users improve their communication skills. It contains twenty-two individual lesson plans, each of which includes both synthetic and analytic exercises. The synthetic materials – question and answer exercises, lists of common sentences around a central theme, word matrices and many other exercises – are designed to help CI users optimize the use of their cochlear implant in everyday situations. The analytic exercises introduce and contrast target consonants or vowels. Developed by Geoff Plant.

**Contents:**
- CD that contains therapist and user handbook
- Speaker cloth screen
- Postcards
- Playing cards

**Recommended Ages:** Adults

**Recommended For:** Professionals

**Cost:** $110.00

**Available Languages:** English, English (UK), German, Norwegian all on one CD

---

**SPEECHTRAX**

SpeechTrax is a resource for clinicians to use with individuals for whom conventional speech tracking may not be appropriate. This material features a modified version of Hans Christian Andersen’s classic story, “The Tinderbox.” This engaging story is divided into 53 sections, each of which consists of brief phrases (averaging 8 words each) for a total of 200 words per section. SpeechTrax is an effective and enjoyable approach to helping cochlear implant users develop and improve their communication skills. Developed by Geoff Plant.

**Contents:**

**Recommended Ages:** Adults

**Recommended For:** Professionals

**Cost:** $70.00

**Available Languages:** English, Dutch, French, German, Polish, Romanian, Spanish all on one CD
HEAR AT HOME
Hear at Home was developed to meet the needs of adults with cochlear implants who require training and support, but who are without easy or ready access to trained therapists. Hear at Home is designed for home use with family members and/or friends as the talkers. The exercises provide the talker with detailed instructions for presentation of the materials. This program is divided into 10 separate sessions. In each session a series of speech sounds is introduced in words and sentences. Other exercises are provided which offer additional practice in the recognition of connected speech. Developed by Geoff Plant.

Contents:  
- CD that contains talker's and receiver's handbook  
Recommended Ages:  
Adults  
Recommended For:  
Professionals, adult CI recipients

Cost: $70.00
Available Languages:  
English, French, German, Romanian, Turkish all on one CD

SYNTRAIN
Syntrain was created to meet the needs of the special group of adult clients who have poor reading skills. This material is also useful for therapy with older children and teenagers. Syntrain has a series of pictorial exercises that require little or no reading. Exercises include spondees and trisyllables in isolation and in simple sentences, as well as picture-based sentence identification exercises. Developed by Geoff Plant.

Contents:

MUSIC NOTES
Introducing Music to Adults with Cochlear Implants
Music Notes is a resource that introduces music to adults with a cochlear implant and aims to improve their musical experience. It provides clinicians with an overview of music and cochlear implants. Music Notes offers suggestions to help enhance music experiences for adults with cochlear implants. Areas covered include early listening activities, music focus groups and music making. This material also provides a number of resources for use in clinical settings. Developed by Geoff Plant.

Contents:  
- CD 1: Music Notes manual in PDF format  
- CD 2: Musical tracks for use in testing and training  
Recommended Ages:  
Adults

Recommended For:  
Professionals, adult CI recipients

Cost: $110.00
Available Languages:  
English

Adult Assessment
MUNICH MUSIC QUESTIONNAIRE
The Munich Music Questionnaire (MUMU) is a research-based, validated tool consisting of 25 questions designed to assess the music listening habits of people with post-lingual deafness before and after cochlear implantation. This questionnaire, developed by Hanna Brockmeier, is intended to supply clinicians with useful information on the past and current role of music in client's lives as well as several other aspects of music appreciation/participation with a cochlear implant.

Contents:  
- Printed questionnaires packaged in sets of 10

HANDBOOK FOR EDUCATORS
Teaching Children Who Listen with a Cochlear Implant

The Handbook for Educators is a comprehensive resource for teachers who want to know more about supporting children in the classroom who are using cochlear implants or who will be undergoing cochlear implantation. Details on everything from basic information on cochlear implant functioning to tips for the classroom teacher at each stage of the cochlear implantation process are provided. These useful tips include classroom and teaching modifications, the importance of auditory skills, how to conduct a daily listening check, how to develop a positive auditory learning environment and much more. This user-friendly handbook also includes a glossary of terms related to cochlear implant systems.

EQUIPMENT GUIDE
OPUS 2 Audio Processor

The Equipment Guide and the Handbook for Educators used in tandem are designed to enhance a teacher’s current teaching practices as he/she works with a student who is learning to listen with a cochlear implant. The Equipment Guide is designed to help professionals and/or parents become confident in handling and assembling parts of the OPUS 2 audio processor, understanding all the available wearing options and objectively verifying that the device is working properly. It provides step-by-step instructions to help identify and solve problems. Although the audiologist or the child’s implant center typically handles advanced troubleshooting, many teachers, therapists, and parents find that minor problems can be quickly managed without disturbing daily learning and listening. Easy step-by-step guidelines for conducting daily listening checks are included.

COMMUNICATION OPTIONS AND EDUCATIONAL PLACEMENTS
A Guidebook for Parents

Communication Options and Educational Placements: A Guidebook for Parents was developed in collaboration with BEGINNINGS for Parents of Children Who are Deaf or Hard-of-Hearing, Inc. It provides a non-biased approach designed to present the more common options a family will encounter on the continuum of communication and educational placements. Those working with parents and babies will find this resource especially valuable.

Contents:

Available Languages: English

Recommended Ages: Young children

PARENT’S GUIDE TO HEARING LOSS
Options for Your Child

The Parent’s Guide is a helpful and informative booklet designed especially for parents. The aim of this booklet is to provide parents with a detailed and easy-to-use guide concerning the different aspects of hearing and hearing loss. Topics include all about hearing and hearing loss, cochlear implants as an option, and an overview of MED-EL’s MAESTRO cochlear implant system. Highlights include a birth - 2 year developmental chart and experiences from other parents. This booklet is an excellent reference for parents and professionals working with young children.

Contents:
- Printed booklet and available as download from www.medel.com

Recommended For: Professionals, parents, teenage and adult CI recipients

Cost: Free

Available Languages: English, Spanish (US)

Recommended Ages: Young children

MADE EASY
OPUS 2 Audio Processor

The OPUS 2 Made Easy card is designed as a quick troubleshooting guide for the Audio Processor and the OPUS 2 FineTuner. The card has diagrams of the audio processor with explanations for changing batteries and cables. One side of the chart explains the different LED blinking patterns with instructions for interpretation and action necessary for each blinking pattern. Designed especially for education and rehabilitation professionals and parents.

Contents:
- Laminated card

Recommended For: Professionals, parents, teenage and adult CI recipients

Cost: Free

Available Languages: English

Recommended Ages: All ages

LITTLE LISTENERS
A Resource for Supporting Young Children with Cochlear Implants

Little Listeners is a comprehensive guide designed especially for parents of young children who receive a cochlear implant before 3 years of age. The current state of the art of cochlear implantation in this young population along with detailed information on preverbal communication and speech, language and auditory development is discussed. The guide is packed full of helpful suggestions for parents to assist them in the facilitation of their young child's communication skill development. Contributors: Marleen Bammens, Leo De Raever, Marianne Haesevoets, Josepha Jans Ria Pans, Hilde Vandstel, Yvette Wolix.
MUSIC AND YOUNG CHILDREN WITH CIs

Music and Young Children with CIs was designed especially for parents of young children. It highlights the benefits of music training, the components of music activities for parents and young children to share, listening to and playing musical instruments and singing. The parent guide also has a Musicality Rating Scale for 25 different musical skills in young children. Developed by Julie Kosaner.

Contents:
• Printed booklet and available as download from www.medel.com

Recommended For: Parents, professionals

Cost: Free

Available Languages: English, Dutch, French, German, Indonesian, Japanese, Spanish, Spanish (US), Turkish

Recommended Ages: Young children

THE FARMER’S CHEESE

The Farmer’s Cheese composed by Oliver Searle is a musical adaptation of a book by the same name that was written by Geoff Plant. Jane Eldershaw is the illustrator. The musical was produced especially for children using a cochlear implant. It can be used by children to develop their own musical activities, develop listening and the imitation and production of sounds and be used as an introduction to musical instruments. The Farmer’s Cheese is told in words, music and movement. The musical and illustrated book feature animals, missing cheese and mayhem on the farm. A colorful hardback storybook with both CD and DVD of the musical concert makes up this package.

Contents:
• Hardback book
• CD
• DVD

Recommended Ages: All ages

THE JOURNEY TO LE DEM

This is the story of the M-Team and their journey to find the magical place of Le Dem. Medelina, Lea Cochlea, Professor Opusxonix and Smarty Marty embark on an adventurous balloon ride in search of the city Le Dem. Along the way, Medelina learns how to care for and be responsible for her audio processors.

This colorfully illustrated book is designed for children ages four and older. It is useful in helping children learn about their cochlear implants and to become independent in managing their audio processors.

Contents:

WILL WONDER COMIC BOOK SERIES

MED-EL’s comic book series is designed to appeal to a young audience while introducing the topic of hearing implants in a fun way. Introduced in July 2011, the comic book features the young superhero, Will Wonder and his bilateral cochlear implants. Will’s “Robot Ears” help him to hear and communicate with others, and newly-discovered special powers make him more sensitive to the vibrations given off by other people, the earth and the environment. The ability to control these vibrations makes Will powerful. Currently available are “Will Wonder and His Robot Ears” and “Will Wonder and the Chain of Three”.

Contents:
• Printed booklet and available as download from www.medel.com

Recommended For: Professionals, teenage CI recipients

Cost: Free

Available Languages: English, German, Spanish

Mellie the MED-Elephant

Resources for helping children understand cochlear implants

**MELLIE AND HER COCHLEAR IMPLANTS**

This is the story of Mellie, the MED-Elephant and her family. This delightful book tells the story of Mellie, a young elephant, and her family from the discovery that she is deaf through the process of candidacy, surgery, programming and use of her cochlear implants. This colorfully illustrated book is useful during the cochlear implant candidacy phase as well as for teaching children about cochlear implants and the implantation process.

**MELLIE GOES TO PRESCHOOL**

Mellie is growing up. This delightful and colorful storybook describes Mellie’s experiences on her first day of school. It is a wonderful resource for parents and professionals working with young children with cochlear implants.

**KIDS’ CORNER**

MED-EL presents Mellie in her online debut. Mellie explains hearing related topics with this online animated slide show. Designed especially for kids, this is a delightful way to teach the following topics: How Hearing Works, About Hearing Loss, How Well You Hear, What is a CI, How to Get a CI, and What Life is Like with a CI. This free resource, available at www.medel.com, is ideal for the classroom, clinic and parents.

**EDUCATOR’S TEACHING KIT**

The Educator’s Teaching Kits include a variety of materials to help educators teach children about hearing, hearing loss and cochlear implants. It also provides educators access to a variety of informational resources. There are two different kits depending upon the child’s age. The kit for children 0 – 3 years of age is geared for children who are about to or have recently received a cochlear implant. The kit for children over age 3 is geared for children who already have a cochlear implant. Please specify when ordering. To enhance the learning experience, each kit can be used with Kid’s Corner, a free resource found on our website at www.medel.com/us/children-kids-corner.
